

BUILDING FOR THE FUTURE:

Innovation, Resilience
and Occupant Well-Being

Friday, November 20, 2026

JW Marriott Parq Vancouver Hotel | 39 Smithe Street, Vancouver, BC

Early Bird Registration: September 30, 2026

BCBEC invites you to stay connected, current and inspired!

The building enclosure industry is in transition. As the demands on our buildings continue to grow, enclosure professionals are being called upon to deliver solutions that balance occupant comfort, energy performance, resilience, sustainability, and long-term building renewal. This year's conference explores how innovative building enclosure strategies are helping transform both new and existing buildings for a changing future.

From enhancing occupant thermal comfort and extending the service life of aging concrete towers to advancing modular construction, green roof systems, deep energy retrofits, and building-integrated photo-voltaics, our speakers will highlight the ideas and technologies redefining building performance. Join us as we explore the opportunities, challenges, and innovations shaping the next generation of building enclosure design.

Join us for this full-day seminar to discover:

- Designing Reliable Green Roofs for Existing Buildings
- Occupant Thermal Comfort: The Blind Spot of the Building Industry
- DASH (Digitally Accelerated Standardized Housing) and Prefabricated Construction
- Concrete Tower Renewals: Integrating Building Envelope and Structural Repair Strategies
- Understanding Building Integrated Photovoltaics
- Predicting Envelope Performance for Existing Buildings
- Vaughn Palmer – Keynote

Whether you're an architect, engineer, contractor, or building official, this is your opportunity to gain valuable insights and innovative solutions for a more resilient built environment.
